

Test resources for the magnet powder test

Sub-primary colour white No. 104 A

Art.-No. 135.006.020

Dries fast and makes testing easier at dark or rough surfaces.

The sub-primary colour is dry after approx. 1 minute and is being used for oil- and water suspension. The sub-primary colour No. 104 A increases due to its good contrast ability the sensitivity at dark magnet powder suspensions.

After finishing the test the sub-primary colour can be removed with cleaner no. 107.

Except technical changes and errors!
Heidgraben, October 2010
